

**API:** Riot Games <https://developer.riotgames.com/api/methods> (Links to an external site.)

I will primarily be focusing on the stats API provided by Riot Games. The current documentation provided by Riot Games only shows developers the URLs to access the api. I will be writing a how-to guide on how to access each individual stat for each player in every region and sum up the how-to with creating global statistics on each champion in the company's game, League of Legends.
